

# TASK SEPARATION

---

The task were separated equally and also based on our strengths. We separated the research and the buying of materials. While Ana started the code, Loreanna and I started the contructions of the cloud. Loreanna focused on the circuit while I focused on the material. Then I finished the contruction of the cloud at home because I had a better sowing machine. Then we all worked on the final parts of the code which was to control the LED strip. Ana mostly took control while Loreanna and I contributed and analyzed.
